| Produc                    | Function                                  | Usage Amount                                                                                            |
|---------------------------|-------------------------------------------|---------------------------------------------------------------------------------------------------------|
| 56 % granule chlorine     | For disinfection                          | 0,5 kg / day for 100 m3 pool water (open to the public)                                                 |
|                           |                                           | 0,5 kg / week for 100 m3 pool water (in home pools)                                                     |
|                           | For shocking                              | 0,6 kg-1 kg / 15 days (open to the public)                                                              |
|                           |                                           | 0,6 kg-1 kg / month (in home pools)                                                                     |
| 90 % granule chlorine     | For disinfection                          | 0,35 kg / day for 100 m3 pool water (open to the public)                                                |
|                           |                                           | 0,35 kg / week for 100 m3 pool water (in home pools)                                                    |
| 90 % granule chlorine     | For disinfection                          | 1 tablet for 100 m3 pool water (once in 10-12 days)                                                     |
| 70 % calcium hypochlorite | For disinfection                          | 0,2 kg / day for 100 m3 pool water                                                                      |
| Ph (-) powder             | PH reducer                                | In order to decrease the pH value 0,1 degree 1 kg for 100 m3 pool water                                 |
| Ph (+) powder             | PH reducer                                | In order to increase the pH value 0,1 degree 1 kg for 100 m3 pool water                                 |
| Ph (-) liquid             | PH booster                                | In order to decrease the pH value 0,1 degree 1 l for 100 m3 pool water                                  |
| Ph (+) liquid             | PH reducer                                | In order to increase the pH value 0,1 degree 1 lt for 100 m3 pool water                                 |
| Moss prohibition          | Prohibits moss generation                 | 1,5 lt dose for 100 m3 pool water. Next does shall be 0,5 lt / week (In outdoor swimming pools)         |
|                           |                                           | 1,5 lt dose for 100 m3 pool water. Next does shall be 0,3 lt / week (In indoor swimming pools)          |
| precipitator              | Flocculant                                | 0,03 – 0,2 lt / day for 100 m3 pool water.                                                              |
| polisher                  | Clarifier                                 | 0,03 – 0,2 lt / day for 100 m3 pool water.                                                              |
| Foot disinfection         | Fungicide disinfecting agent              | 0,5 % used by watering                                                                                  |
| Surface Cleaner           | Surface disinfection                      | 1 % used by watering                                                                                    |
| Winter Maintenance        | Against Mossiness and freezing in winters | 3-4 lt for 100 m3 pool water, dependent upon hardness of water this process is repeated once in a month |

## WARNINGS

- While using chemical materials the labels shall be read carefully and instructions shall be followed
- The products shall never be mixed with each other, firstly one of them shall be thrown to the pool and then the other one.
- Gloves shall be used while chemical products are used, if there occurs eye contact eyes shall be washed with lots of water and immediately the person whose eye has contacted with these chemicals shall go to doctor for control.
- Chemical products shall be kept out of reach of children in a place which is dry, closed and airy and do not get closer to these chemicals with fire.

## Problems and Their Solutions (for 100 m3)

| PROBLEM                     | REASON                                                                                  | SOLUTION                                                                                                                                                                                                                                                                                                                        |
|-----------------------------|-----------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Muddy Water                 | 1) pH high<br>2) Over resolved solids<br>3) Bad filtering<br>4) Over organic subsidence | 1) adjust pH between 7,2-7,6<br>2) Change some of the pool water with fresh water<br>3) Clean the filter with reverse washing. Perform the precipitation process by using 2 litres precipitator in 100 m3 water with liquid precipitator (shock implementation).<br>4) Perform shock with granule chlorine which has 90% ratio. |
| Green Water                 | Moss generation                                                                         | Perform shock chlorination with granule chlorine which has 90% ratio.<br>Add 2.5 litres antifouling compounds to the pool which is 100 m3 water after brushing the surfaces and sweeping them.                                                                                                                                  |
| Brown Water                 | Availability of ferrous or managanese                                                   | Perform shock chlorination and add 1 litre for 100 m3 water                                                                                                                                                                                                                                                                     |
| Irritations on eye and skin | 1) Unadjusted pH<br>2) combined chlorine is too much                                    | 1) control and adjust pH between 7,2-7,6<br>2) Perform shocking process by adding 1 kg chlorine which has 90 % ratio to 100 m3 water<br>3) Do not use the pool for 2 days                                                                                                                                                       |

## PUTTING INTO USE OF THE POOL IN THE BEGINNING OF THE SEASON

The processes below shall be followed in order to prohibit the problems that can be occurred during season.

- All the equipments shall be reviewed; if necessary the service shall be called.
- If it is necessary, the pool shall be emptied and then buttom of the pool and the side walls of the pool shall be cleaned with watered moss solvent.
- If the pool is empty, fill it up with water, if it is already filled up with water then make the filtration sytem work.
- Perform the precipitation process by using 2 litres precipitator for 100 m3 water. 3-4 hours after the precipitator is added to the water stop the filtration process. Perform the sweeping process after one night passes.
- Restart the filtration system.
- Bring the pH and alkanin values to ideal values.
- Evaluate all the measurement values again (ph). Alkanin, chlorine, combined chlorine, solidity.
- Perform shocking process with chlorine which has 90 % ratio. Start to routine implementation after the pool is put into use and the controls are completed.

# WATER DEPURATION SYSTEMS - SISTEMI DI DEPURAZIONE DELL'ACQUA

QUOTATION UPON REQUEST - QUOTAZIONI SU RICHIESTA

## Norm Series

Filter tanks made out of glass-fiber reinforced plastic of high quality. Handmade to guarantee maximum chemical and mechanical resistance. The components of the tubing are made of PP, ABS and PVC. All the installed screws are made of high-strength and corrosion-resistant INOX and the screw nuts of nicked brass.

The filter tank is delivered including a connection for manual or automatic air-vent and an emptying connection.

Distribution ☐ Nozzle plate

Pressure ☐ 2,0 / 2,6 bar

☐ 2,5 / 3,75 bar

Approved ☐ DIN / ÖNORM

☐ UNI 10637

## Optional

Color of the tank

Filter bed 1.500 mm

Transparent covers

Connection dimensions

Sight glass

Manual / automatic valves

Filter tanks made out of glass-fiber reinforced plastic of high quality. Handmade to guarantee maximum chemical and mechanical resistance. The components of the tubing are made of PP, ABS and PVC. All the installed screws are made of high-strength and corrosion-resistant INOX and the screw nuts of nicked brass.

The filter tank is delivered including a connection for manual or automatic air-vent and an emptying connection.

- Distribution ☐ Nozzle plate  
 Pressure ☐ 2,5 / 3,75 bar  
 Approved ☐ UNI 10637
